Department of Mathematics  
University of Maryland  
College Park, MD, 20742  
Telephone: Office, (301)–405–5051  
Telephone: Cell, (301)–802–1876  
e-mail: pmf@umd.edu

### Personal Information

Born in Youghal, Republic of Ireland; U.S. and Irish citizen

### Education

B.S. in Mathematics, 1966, Rutgers University, Phi Beta Kappa: Age 19  
Ph.D. in Mathematics, 1971, Rutgers University

### Principal Professional Positions

- 1996–2007:** Chair, Department of Mathematics, UMD  
**1994–1996:** Undergraduate Chair, Department of Mathematics, UMD  
**1984–present:** Professor of Mathematics, UMD  
**1971–1973:** Courant Instructor, Courant Institute of Mathematical Sciences, N.Y.U.  
**1973–1975:** L. E. Dickson Instructor, Department of Mathematics, University of Chicago

### Current Research Interests

My research interests lie in the study of topological methods in nonlinear operator theory, with particular interest in the study of bifurcation of solutions of parametrized families of nonlinear partial differential equations. One aspect of this has been the development of a topological degree for nonlinear Fredholm mappings. The essential novelty of this degree is that it presents a new, precise description of the homotopy property of degree that is needed to establish bifurcation for one parameter families of such mappings (see [39], [40], [42] and [43]). This homotopy property is associated with an invariant called *parity*, an integer defined for paths of general linear Fredholm operators with invertible end-points on a real Banach space. The parity of the path of linearizations about the trivial solution was, in the absence of variational structure, shown to be a complete invariant for the determining of bifurcation via linearization. For problems that have a variational formulation there are more particular criteria to determine bifurcation based, in the finite dimensional setting, on Morse theory, and, in general, on the concept of spectral flow, which is defined for paths of *self-adjoint* Fredholm operators on a real Hilbert space. In the study of bifurcation for one parameter families of variational problems a stable bifurcation criterion has been described in terms of the nonvanishing of spectral flow (see [46], [47], [48], and [49]) which, in [52], was shown to be a complete invariant for the determining of bifurcation via linearization for variational problems. These methods can be used to study important classes of pde's (see [48], for instance). However, there are important problems that lie outside the present methods: roughly speaking, these are problems whose linearization are necessarily *unbounded* self-adjoint operators. In recent work, I have been studying spectral flow of paths of unbounded self-adjoint operators and its application to bifurcation of homoclinic orbits and nonlinear pde's. Much of this work has been done in a longstanding partnership with Jacopo Pejsachowicz of the Politecnico di Torino.

## Selected Lectures

- Nine invited lectures at Oberwolfach conferences between 1978 and 2000
- Colloquia at various US Universities, including at Brown, Cornell and U. Chicago
- Jacques Lions Séminare, College de France, January, 1983
- Seminar Lectures at the University of Paris- Orsay, February, 1983
- PDE Seminar, Universität Zürich, January, 1998
- Applied Mathematics Seminar, the Mathematics Institute, University of Oxford, January, 1998
- Several Analysis Seminars, Politecnico di Torino
- Conference on Topological and Variational Methods in PDE, Cuernavaca, Mexico, February, 1999
- Principal Speaker and Section Organizer, Third World Conference on Nonlinear Functional Analysis, Catania, Italy, July, 2000
- Inaugural of James Stewart Center Colloquium, McMaster University, September 2003
- Lecture, Conference on Variational Methods and the Nonlinear Schrödinger Equation, Ecole Polytechnique Fédérale de Lausanne, February 2004
- Lecture, SIAM Conference on Partial Differential Equations, Houston, November, 2004
- Plenary Speaker, SIDIM 2007, University of Puerto Rico, Ponce, July 2007
- Speaker, Complex Patterns in Nonlinear Systems, University of Torino, January, 2015
- Lectures at King Saud University of Science and Technology, January, 2016
